

Product:
LD 100 A

Available in:
250g & 1Kg

Application type:
Paint or Surface Spray

LD 100 A is a distinctive powder-concentrate insecticide, based on the well-known active Azamethiphos. LD 100 A has been formulated for professional use against flies in all livestock housing.

- *Can be applied as both a spray and a paint*
- *Kills by both contact or ingestion*
- *Kills flies virtually instantly*
- *Azamethiphos has the fastest rate of kill compared to any other chemical on the market*
- *Especially effective against resistant flies*

Insects Controlled by LD 100 A:

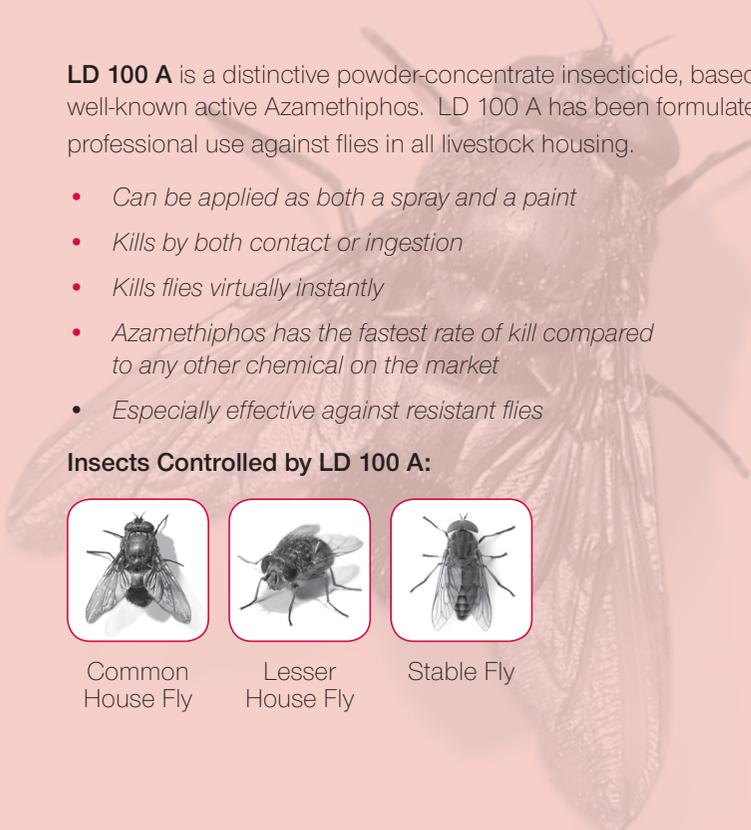

Common House Fly

Lesser House Fly

Stable Fly

Mode of Action:

Inhibits the enzyme cholinesterase in the synapses of the neurons which prevents the transmission of nerve impulses in the fly.

Method of Application:

LD 100 A can be applied as a Spray by diluting the concentrate powder with warm water and spraying the solution on to areas where flies congregate such as walls, windows, posts and door frames. It can also be applied as a paint by mixing equal amounts of LD 100 A with sugar and water. The paste can then be applied using a paint brush to paint spots directly on to problem areas around the shed. It can also be painted on boards and hung around the housing or under slats.

Health & Safety:

Whenever using LD 100 A, we advise the use of:

Protective
Clothing

Gloves

Face Shield

Eye
Protection

Breathing
Apparatus

Use Biocides Safely:

Always read the label and product information before use.

Application Rate:

Spray Application 250g in 2 ltr warm water

Paint Application 250g + 250g sugar in 2 ltr warm water
