• 2 different quaternary ammonia (1 single chain: alkyldimethylbenzylammoniumchloride: 170.6 g/L (17.06%) and 1 twin chain: didecyldimethylammoniumchloride: 78 g/L (7.8%), thus broadening the spectrum of the quaternary ammonium group)  
• a safe, modern aldehyde, widely used in human medicine: glutaraldehyde: 107.25 g/L (10.73%)  
• alcohol: isopropanol: 146.25 g/L (14.63%)
